## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over the admitted prior art (APA) in view of either Leon et al or Williamson. APA is the apparatus and its problems discussed on the first few pages of the specification. This includes a tank formed of fiberglass or corrugated polyethylene with welding type securing means. As noted, welding is a labor intensive process. Also, fiberglass tends to crack leading to premature wear. Both secondary references disclose similar apparatus including the use of HDPE as the forming material and butt fusion as the securing means. In order to prolong tank use, it would have been obvious for one of ordinary skill in the art to modify APA by forming the tank of butt fused HDPE material, taught to be desirable by both secondary references.
